

# Planning Data Exchange

## Alleviate the burden of reporting with Planning Data Exchange

You're struggling to reconcile disparate data sources, efficiently manage manual processes and correct inconsistent reporting. Your staff spend valuable time collecting and packaging data, but you know that this time can be better spent reviewing and approving applications to get more homes built faster. So how best to streamline these workflows?

The Planning Data Exchange alleviates the burden of provincial/regional-to-municipal reporting by allowing higher-tier governments to securely and instantly view your municipal data. The data stays in the source system, and once it's set up, your municipal GIS analysts' time will be freed up.

### KEY BENEFITS

- Unified reporting: Access a single source of truth, ensuring consistency and accuracy across organizations.
- Privacy and security: Safeguard sensitive data and manage who can access it.
- Standard adoption: Improve data quality and consistency by adopting standardized practices.
- Efficiency gains: Streamline processes, freeing up valuable staff time.
- Informed decision-making: Consistent visualizations empower better governance.

### DID YOU KNOW...

The Regional Municipality of York, a customer of Esri Canada, was the first organization in the world to deploy this type of exchange with its nine local municipalities, two school boards and two conservation authorities. As a result, the Region won global acknowledgement for its achievements.
